

## CottShunt® Cathodic Protection Circuit Components

A calibrated CottShunt® makes it possible to measure cathodic protection currents and potentials with the highest degree of accuracy, reliability, and ease.

Designed specifically for the cathodic protection industry and

manufactured from the finest materials available

by Cott Manufacturing

Company in Los Angeles, California, the CottShunt® is available through Cott's worldwide network of authorized distributors.

## Features

### Circuit Board

Makrolon® polycarbonate is one of the world's toughest plastics. Color coded for easy value recognition.

### Current Strips and Potential Posts

Nickel plated brass.

### Resistance Wire

Manganin (ASTM B267, CI.VI)

### Configuration

Standard 1/4" holes on 1" centers fits all Fink® brand cathodic protection test stations.

### Quality Assurance

All CottShunts® are 100% tested and calibrated to within  $\pm 1\%$  of advertised resistance value.

Red - 0.1 ohm, 2 amp capacity

Yellow - 0.01 ohm, 8 amp capacity

Orange - 0.001 ohm, 25 amp capacity
